Why Choose US ?

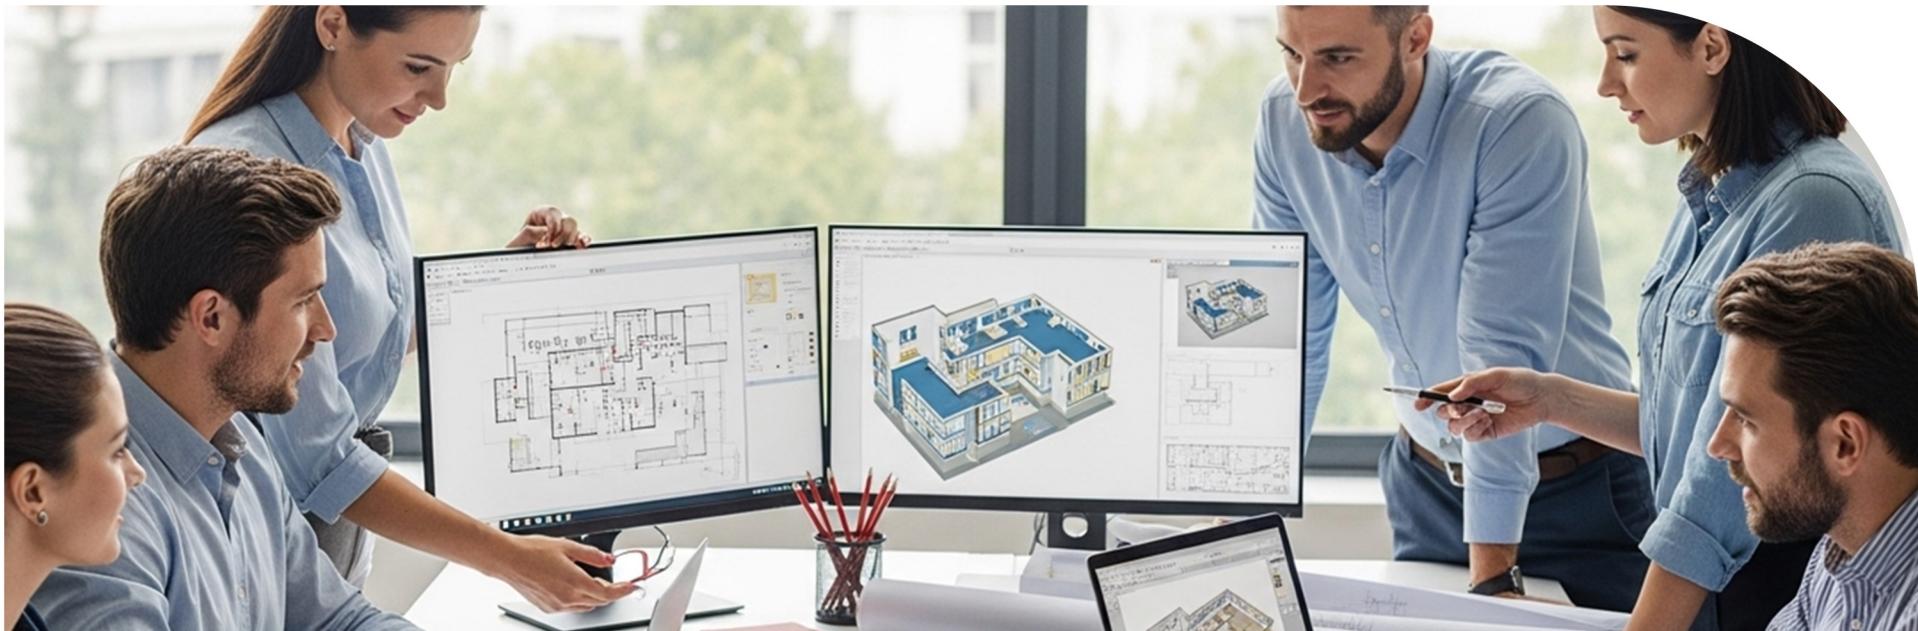

Reps win more when they spend time with customers - not on takeoffs. We replace past in-house habits with a reliable, SLA-backed engine for takeoffs, selections, quotes, and submittals. You redeploy talent to the field, reduce office load, and improve team well-being while bids move faster with higher accuracy.

Our Promise

- 1. Fast, Accurate Selections** - Delivered in your format, quote- and submittal- Ready.
- 2. Ready. Secure by Design** - Dedicated client portal with ISO-aligned cybersecurity and audit trails.
- 3. Flexible Plans** - Office-based pricing and services that scale with your Pipeline.
- 4. 24x7 Expert Chat** - Real-time support for sales engineers and project teams.
- 5. Advanced RFI Workflow** - Track RFIs and addenda end-to-end with clear ownership and response SLAs.

Services

Quantity Take Off

We provide MEP quantity takeoffs that reps, contractors, and design engineers can act on immediately. Using in-house AI, Bluebeam, PlanSwift, and On-Screen Takeoff, we extract precise counts and lengths from your drawings and return a clear, exportable package.

HVAC: equipment schedules, FCU/VAV counts, duct and fittings

Plumbing: fixtures, domestic/hydronic piping, valves, specialties

Electrical: Controls, electrical panels, feeders, lighting, devices, conduit and cable

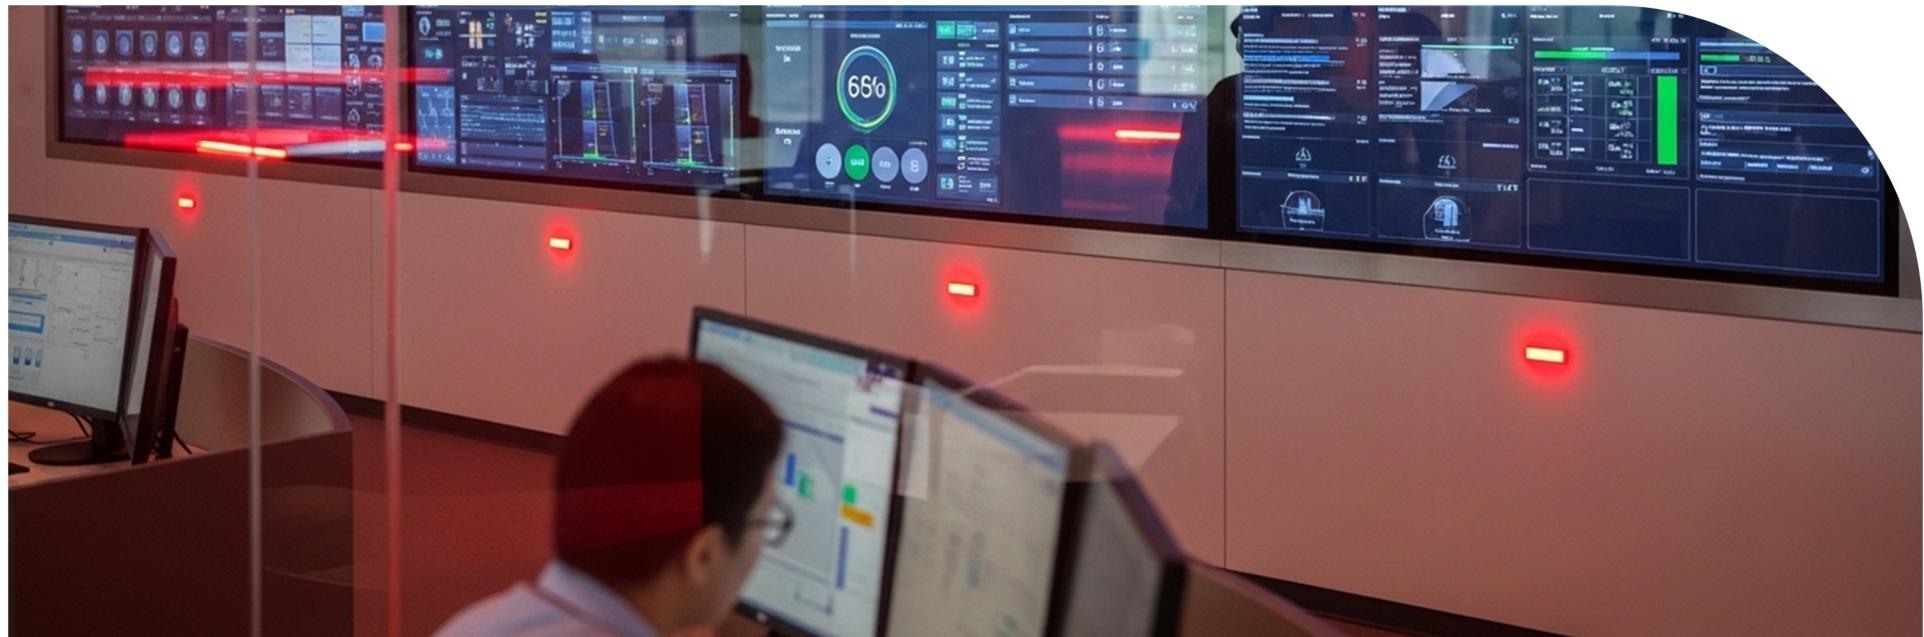

Deliverables: BOMs, marked-up plans, CSV/Excel in your template

Equipment / Product Selection

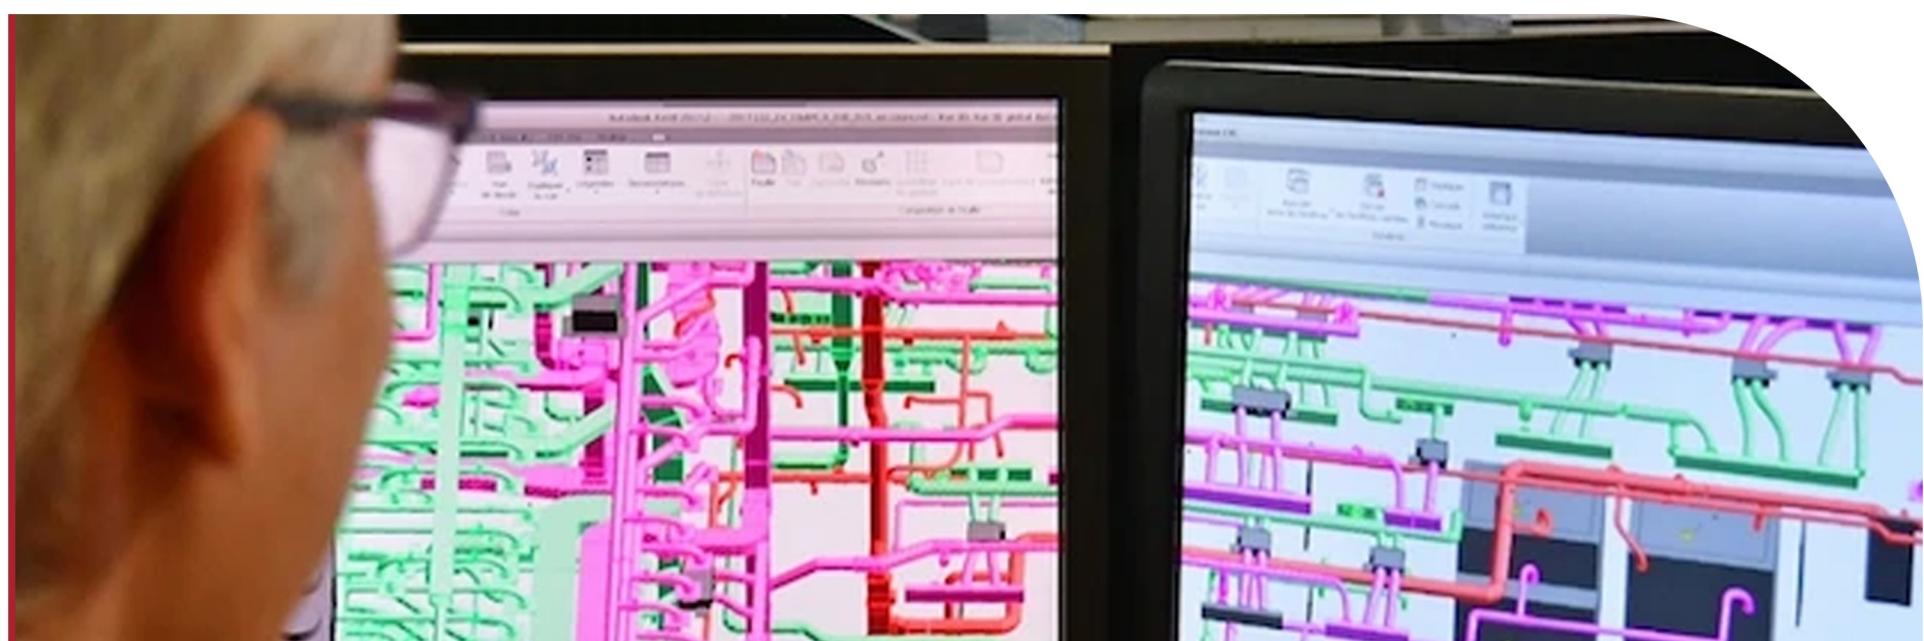

We deliver fast, accurate selections for HVAC air-side, chilled-water, and refrigerant systems, including controls. Our engineers align choices with OEM rules, regional preferences, and local codes, then package results in your format for reps, contractors, and design engineers. We also provide AI-enhanced product comparisons to highlight performance, cost, and lead-time trade-offs.

Services

Spec Review

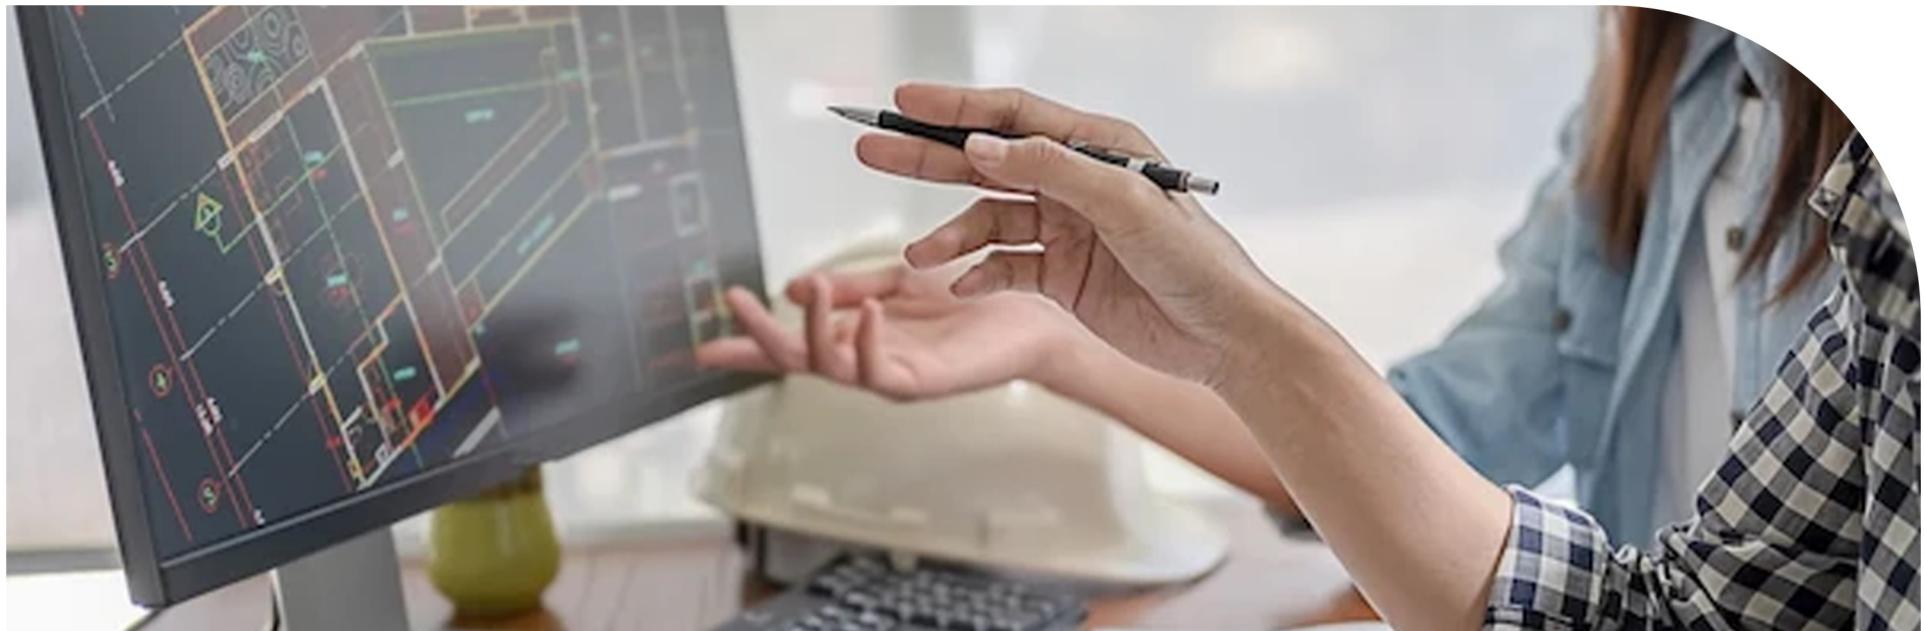

JES reviews specifications to ensure all representative products are listed, maximizing bid opportunities. Provides feedback within 24 hours through the JES portal. Supplies a pre-defined email.

BIM Modelling

Building Information Modeling (BIM) employs different levels of detail (LOD) to categorize the extent of development and detailing within a BIM model. These levels help define the granularity and sophistication of information contained in the model at various stages of the project.

Services

MEP Drafting

We specialize in providing high-quality Mechanical, Electrical, and Plumbing (MEP) AutoCAD drafting services that cater to the diverse needs of the construction and engineering industry. With a dedicated focus on precision, innovation, and efficiency, we serve as your trusted partner in delivering impeccable MEP drafting solutions.

Energy Modelling / Building Engineering Services

We provide advanced Energy Modelling and Building Engineering services to optimize the efficiency, sustainability, and performance of building systems. Our analyses are rooted in precise engineering calculations and simulation tools to ensure comfort, reliability, and energy savings across MEP systems.
